# View Only App

## Launching the App

### Summary

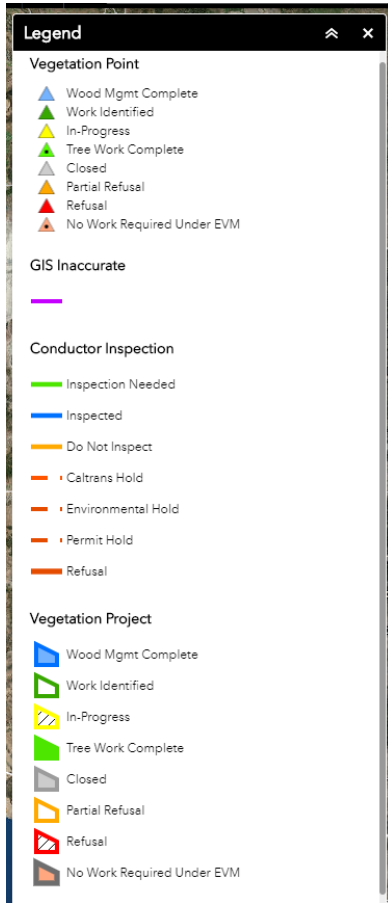

The View Only App is a way to view field data on a desktop computer. This application is intended for viewing only and there is no editing functionality.

The App can be found at the following link: <https://tinyurl.com/EVM-Desktop-Viewer>

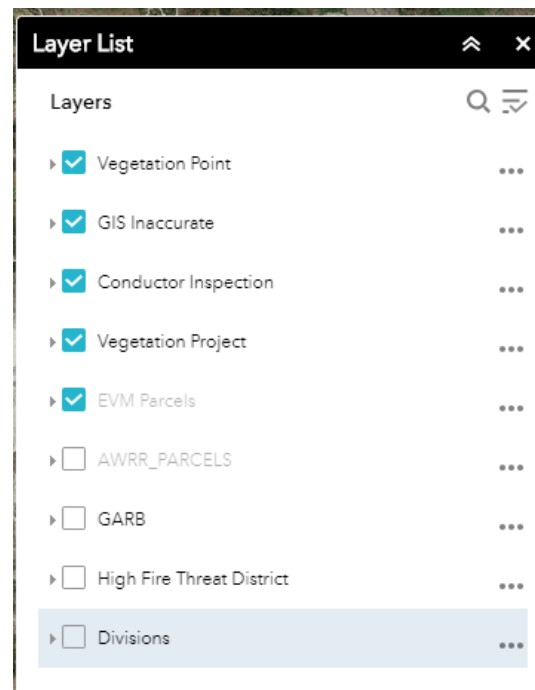

# View Only App Widgets/Tools

## Legend and Layers

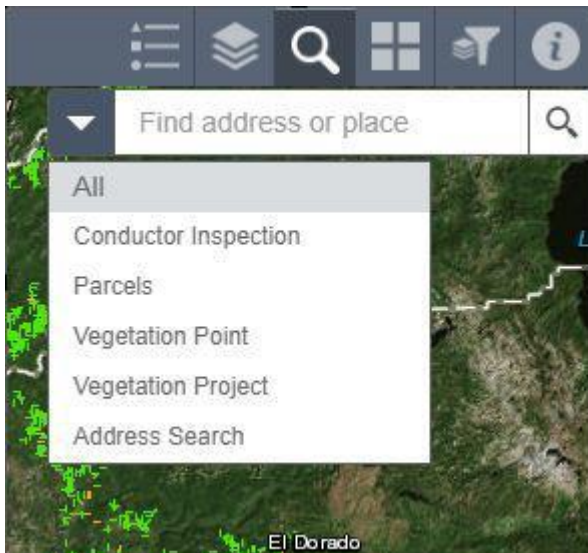

- The legend widget displays the **map legend and the symbols and colors** for each layer.

- The Layer widget displays **all layers available in the map.**
- The layers can be turned on and off by clicking on the blue check mark.

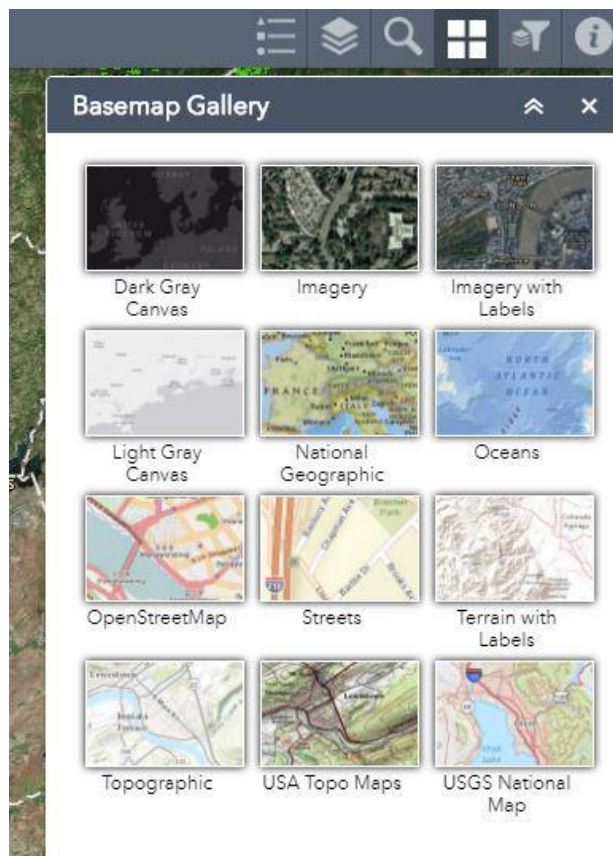

# View Only App Widgets/Tools

## Search and Basemap

- The Search widget allows you to **search in map layers** including:
  - Conductor Inspection
  - Parcels
  - Vegetation Points
  - Vegetation Projects
  - Address

- The Basemap widget provides the option to change the **background of the map**.

# View Only App Widgets/Tools

## Group Filter

- ☐ Select the **Circuit Name** from the drop down and click apply.
- ☐ Multiple circuits can be filtered at the same time by selecting **Add Criteria**.
- ☐ To remove the filter, select Reset

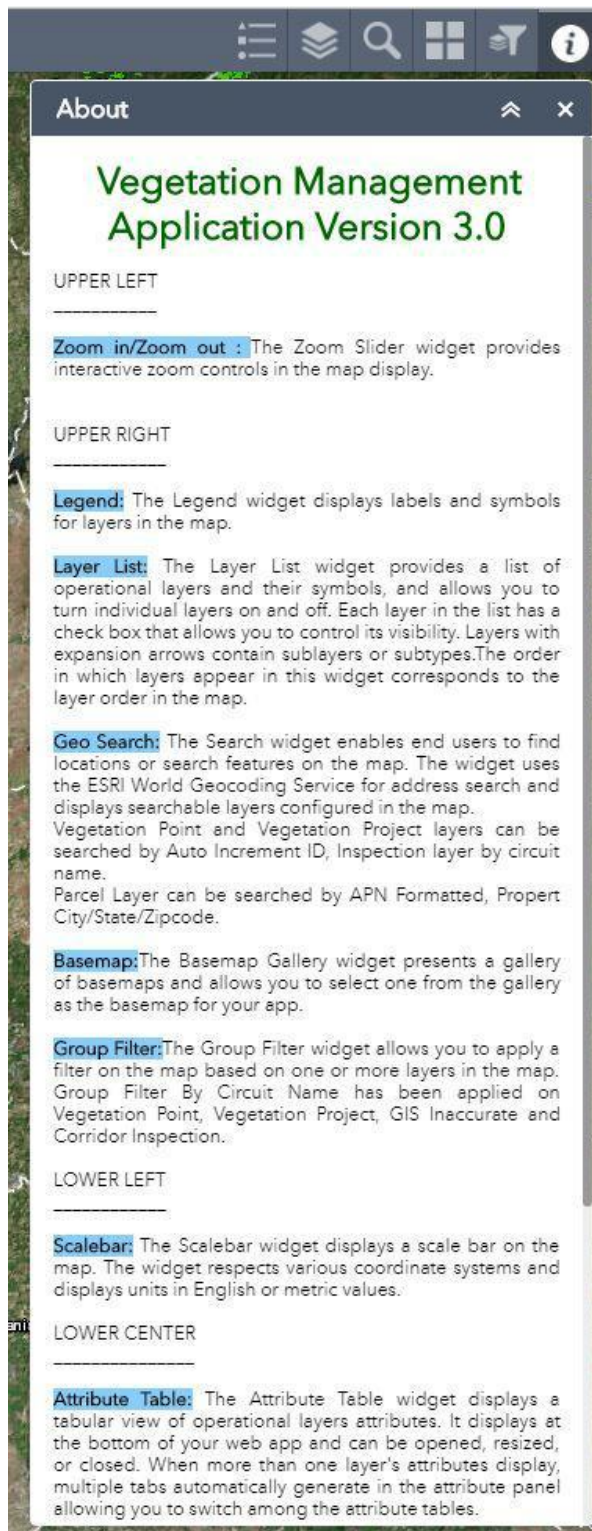

- ☐ The **group filter** allows you to filter all the layers in the map by **one or more circuits**.

# View Only App Widgets/Tools

## Information Widget

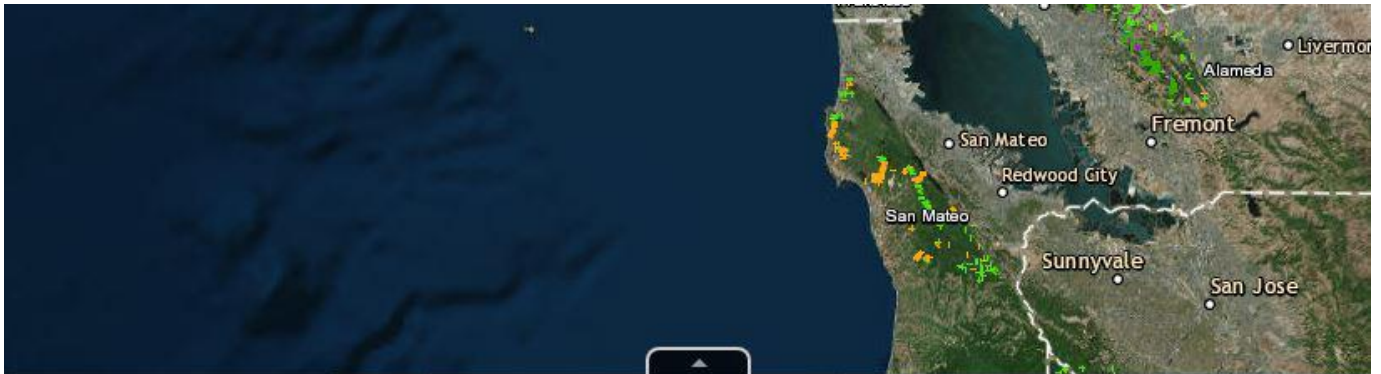

- The Information Widget provides details for each item in the map.

# View Only App Table View

## Expand and View Table

- To view table data, select the tab at the bottom center of the screen.

- You can view data specific to the **Vegetation Points, Vegetation Projects, Parcels, and Corridor Inspection layers** in the table.
- If you previously applied a group filter, **only the data on the circuit you filtered by** will be included.
- If no group filter was selected, **the table will include all data within the service area.**

Vegetation Point   Vegetation Project   Parcels   Corridor Inspection															
Options Filter by map extent Zoom to Clear selection Refresh															
LANID	Visit Date	Veg Type	Species	Tree Diameter	Tree Height	Prescription	Status	Comments	Point ID	PARCEL_ID	CIRCUITNAME	PARCEL_NAME	AUTO_ID	GlobalID	
JWJ	9/13/2018, 2:14 PM	Hazard Tree	Pine	R1 - 4-11.9	45	Remove	Work Identified	Dying pine leaning towards lines			SILVERADO 2104	965848008		d113c73b-46a5-4e23-b72b-039fe5b8c4b	
ASGZ	9/13/2018, 2:20 PM	Hazard Tree	Ponderosa Pine	R4 - 36 +	95	Remove	Work Identified				SILVERADO 2104	965847794		aee6178be-367a-4c74-851d-f1394d4248bb

## Table Filtering

To filter table data, first select the tab of the layer you would like to use (the example below uses Vegetation Point). Only one layer can be filtered at a time.

1. Click on the **Options** drop down menu, followed by **filter**.
2. Click **Add expression** to apply a filter.
3. **Select the field you would like to filter by** (e.g. LAN ID, Status, etc). This example filters by **Status**.
4. Select the **search criteria** by clicking on the **Cog**.
5. Select **unique** to get a list of values to choose from in the field you are searching.

# View Only App Table View

## Table Filtering

Filter

+ Add expression + Add set

Display features in the layer that match the following expression

Status (String) is - empty -

Search

- empty -

Complete

Refusal

Work Identified

OK Cancel

6. Select the **fields** you would like to filter by.

In this example, **Refusal** has been selected. After the filter is applied, only the filtered items will show in the table.

Vegetation Point	Vegetation Project	Parcels	Corridor Inspection							
Options	Filter by map extent	Zoom to	Clear selection	Refresh						
LANID	Visit Date	Veg Type	Species	Tree Diameter	Tree Height	Prescription	Status	Comments	Poin	
	9/13/2018, 1:21 PM	Reliability Tree	Ponderosa Pine	R3 - 24-35.9	100	Trim	Refusal	Large tree. Over hangs. Healthy, but does not meet minimum.

Filter

+ Add expression + Add set

Display features in the layer that match the following expression

Status (String) is Refusal

OK Cancel

**!** Remember to **clear the filter** by clicking on the X if you need to view all data.

# View Only App Table View

## Sort Table and Statistics

You can easily sort the data by **ascending or descending order** in table view. You can also view the **statistics for mileage** in the **Vegetation Project layer**.

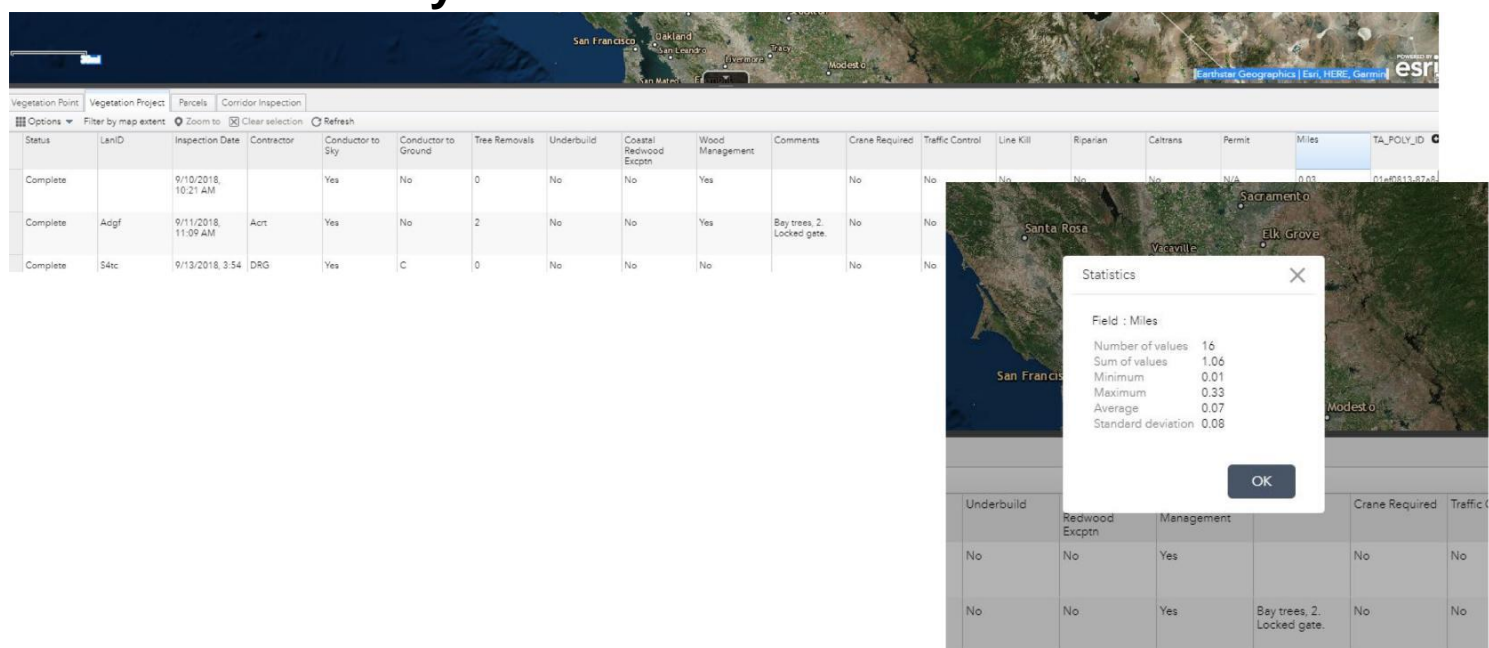

To sort a column by **ascending or descending order**:

1. Select the **column title** you would like to sort (e.g. LanID, Tree Removals, etc.)
2. Once you click on the column title, you will be given the **sorting options**.

You can also use the same function to view **mileage statistics**.

To view mileage statistics:

1. Select the **column title "Miles"** in the **Vegetation Project tab**.
2. Select **Statistics**.
3. A pop-up screen will display the statistics including the sum of the miles. **If you would like to sort by miles complete, be sure to follow the directions for table filtering on page 8 and sort by Status.**

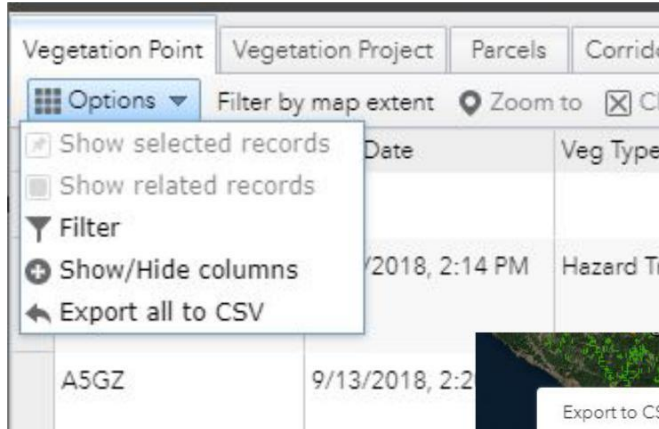

The screenshot displays the 'Vegetation Project' layer in the View Only App. The interface includes a map at the top showing the San Francisco Bay Area. Below the map is a table with the following columns: Status, LanID, Inspection Date, Contractor, Conductor to Sky, Conductor to Ground, Tree Removals, Underbuild, Coastal Redwood Excpn, Wood Management, Comments, Crane Required, Traffic Control, Line Kill, Riparian, Catrans, Permit, Miles, and TA\_POLY\_ID. The table contains three rows of data. A pop-up window titled 'Statistics' is open, showing the following statistics for the 'Miles' field:

Field : Miles	
Number of values	16
Sum of values	1.06
Minimum	0.01
Maximum	0.33
Average	0.07
Standard deviation	0.08

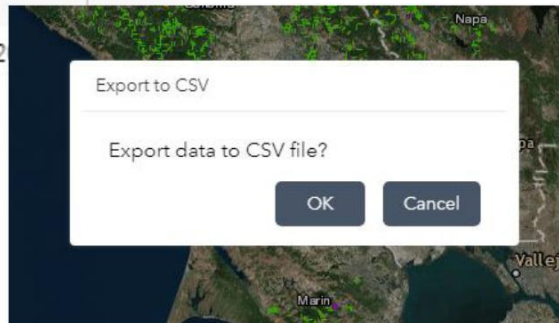

The pop-up window also includes an 'OK' button.

# View Only App Table View

## Export to CSV

- ☐ To export data to CSV (Excel), select **Export all to CSV** in the Options menu on the table.
- ☐ Only one layer will be exported at a time.
